Code is just a mode, eliminate it. We no longer need a hand crank to
start our cars in the morning, and we no longer need code to
communicate over HF. There is a lot of great technology available
for use over HF, so code, which is just another mode, should not
be the firewall that limitis someone's access to the HF bands.

Any restructuring of the amature testing should also be applied to
to those renwing their license. Especially since they were
probably never tested on their ability to operate under the new
modes like psk-31.

In short, remove element 1, the code test, leave the rest of the
testing like it is. Code is just a mode, if you want to use it then
go right ahead. Yes, I passed my code test.
